Thank you for purchasing one of our designer shelves!

Here is an easy step-by-step guide to install your new shelf. However, it is always a good idea to have a carpenter or someone with handyman experience install our products.

### Picture A: TOOLS NEEDED

- Drill With #2 Phillips Driver Bit
- Level
- Pencil
- Stud Finder
- Tape Measure
- 1/2" Socket Driver Or Wrench

### Picture B: PLACEMENT

Decide where you'd like your new mantel to be located. Using a level make a level mark 4 3/4" below desired finished overall height. This will be the bottom of the wall mounting board.

### Picture C: ATTACH MOUNTING BOARD

Locate framing studs using a stud finder (framing studs are usually 16" on center). The wall mounting board is predrilled at 2" spacing to accommodate center of framing studs. Align holes in mounting board over studs.

Using the drill and #2 driver bit, tighten screws all the way in securing mounting board to wall. Additional holes may be drilled through wall mounting board if needed.

### Pictures D & E: ATTACH CORBELS

If your mantel came with corbels attach them now through the predrilled holes. Use the washers and 1/2" nuts included with your mantel. Tighten nuts securely **DO NOT OVER TIGHTEN**

### Picture F: HANG THE SHELF

Place the shelf over the wall mounting board by locking the angles one over the other. The reverse mounting board inside the shelf is glued permanently in place allowing the shelf to hang securely.

Thank you again for your purchase. **If you have any questions please do not hesitate to call 801-577-9634.**
